

# British Museum Conference and Workshops on APACHE Project & Nano-Systems

Research and Applications on Cultural Heritage

Date: (Tue) 4 and (Wed) 5 June 2019 Venue: Sloane Room and WCEC at the British Museum

#### Introduction

We have, with great generosity, been offered a conference/workshop on two EU projects: Nano-system (including **Nanorestart**) (for the conservation cleaning of painted surfaces using nano-gels) and **APACHE** (Active & intelligent Packaging materials and display cases for preventive conservation of Cultural Heritage). Specialists involved in the Nanorestart Project (Dr. Piero Baglioni and Dr. Gabriella Di Carlo from the Research Centre for Colloid and Surface Science in Florence, and paper conservator Dr. Antonio Mirabile) have agreed to come and present their innovative work. For more information about the project and their work with the Tate, see <a href="https://www.youtube.com/watch?v=8zCzlyN2QW8">https://www.youtube.com/watch?v=8zCzlyN2QW8</a>.

The Morning session on Day 1will give an overview of the **APACHE** project. The talks have been designed around three main research orientations: modelling, novel materials and dissemination strategy. This session on is open to a wide audience including conservators, curators, collection care managers, registrars, and scientists.

The Afternoon Session on Day 1, open to a conservation and science audience, will explore the **Nanorestart** project, the world of nano-science & nano-materials applied to the conservation of cultural heritage (including the removal of tapes and surface coatings). The lectures and presentations will explain the theoretical, research and implementation aspects of nano-materials

On Day 2 the practical workshops will enable conservators to apply methods and materials. The morning session, open to 24 conservators, is more general. The afternoon sessions will be more specific, looking at and experimenting with nano-systems for the treatment of objects made from organic and inorganic materials.

Megumi and Barbara 18/04/2019

## **British Museum Conference: APACHE Project**

Active & intelligent packaging materials and display cases as a tool for preventive conservation of Cultural Heritage

Date: (Tue) 4 June 2019 Venue: Sloane Room at the British Museum

### The APACHE Project

The EU funded APACHE project (which recently started in January 2019) will develop active novel packaging materials, based on materials modelling with sensors and wireless sensor technologies (WST), that will provide smart, easy-to-deploy systems for storage and exhibition of artefacts.

One of the main goals is to dramatically reduce the costs of mechanical climate control and monitoring systems by refining and customising these smart, affordable new materials. The current, expensive Passive Sampling Devices and monitoring systems are often cumbersome to calibrate and fail to deliver the correct sensing in a timely manner.

## **Programme**

Time	Speaker	Title	Room / Capacity			
DAY 1: (Tue) 4 June 2019						
APACHE Project: Active & intelligent packaging materials and display cases as a tool for preventive conservation of Cultural Heritage Chair: Sandra Smith (Head of Collection Care)						
10:00-10:40	Piero Baglioni	APACHE project, general overview	This session is open to			
10:40-11:10	Josep Grau-Bove (UCL London)	APACHE project Modelling enclosure microenvironments	including conservators, curators, collection care managers,			
11:10-11:30	Coffee Break		registrars, scientists.			
11:30-12:00	Gabriella di Carlo	APACHE project Absorbents and sensors	Sloane Room			
12:00-12:30	Antonio Mirabile	APACHE project Training plan and transfer to stakeholders				
12:30-13:00	Discussion and Questions [an invited chair will field questions]					
13:00-14:00	Lunch					

**Speakers: APACHE Project** 

**Dr Piero Baglioni** is full professor of Physical Chemistry at the Department of Chemistry of the University of Florence, and MIT affiliate. He has been appointed as Visiting Scientist/Professor by the Department of Chemistry of the University of Houston, the Weizmann Institute, the College de France, and the MIT. He is the Director of the National Consortium for Colloid and Nanoscience (CSGI). He is the major Italian contributor to "Soft Matter" with more than 350 publications on books and on largely diffused international

journals. He is also the author of 25 patents. He produced several innovations in the field of both inorganic and organic colloids.

**Dr Gabriella Di Carlo** is Researcher at CNR-ISMN and her main research interests include synthesis and surface studies of advanced materials with tailored nano-chemical, structural and morphological features to be used for sensors, delivery e micro-electronic devices. Another field of interest is the identification of the degradation causes acting at micro and nano-scale in order to define the most appropriate conservation strategies. She works on the synthesis and validation of innovative materials with stimuli responsive properties for a long-

lasting and safe conservation of metals. She has authored about 70 publications on international ISI journals with an H index of 24 (Google Scholar).

Antonio Mirabile began his career in 1988, he is a paper conservator and a consultant in preventive conservation. He studied Book and Paper conservation in Florence, Italy, and Preventive Conservation in Paris, France, where he actually lives. In France he is accredited by French Ministry of Culture to conserve and restore the cultural heritage belonging to the Musées de France. He works regularly for public and private collections. As UNESCO expert he worked in various paper conservation and preventive conservation projects. As

partner of EU funded project Nanorestart he is involved in the scientific identification of dyed-based inks used in contemporary drawings, in the development of innovative methods in order to improve conservation treatments and in the transfer of novel materials and methods to conservators.. He is the author and co-author of about 50 articles and wrote two handbooks published by UNESCO. He is an active member of INCCA, ICOM and the Blue Shield.

**Dr Josep Grau-Bove** is an engineer by training, PhD in Heritage Science. He is a lecturer in the UCL Institute for Sustainable Heritage where he directs the MRes in Science and Engineering in Arts, Heritage and Archaeology. His main research interest is the use of mathematical models in preventive conservation, in order to understand how materials and the environment interact. He is also working on heritage citizen science, developing ways in which the public can help with data collection.

## **British Museum Conference and Workshops on Nano-Systems**

Research and Applications on Cultural Heritage

Date: (Wed) 5 June 2019 Venue: WCEC at the British Museum

### Nano-Science and Nano-Materials (e.g. The Nanorestart project)

Nano-materials exhibit characteristics that are peculiar and different than those of other bulk materials, offering enhanced chemical, electrical, magnetic and optical properties that are advantageous in a range of applications. The "Nano-science revolution" began forty years ago and has now led to the creation and development of entirely new technologies thanks to the formulation of smart and functionalized materials that often exploit the ability of matter to self-assemble. Nano-materials applied to the world of conservation of cultural heritage is offering us significant benefits from new materials and products.

### **Programme**

Nano-Systems Research and Applications to Cultural Heritage   Chair: Carl Heron (Director of Scientific Research)	Time	Speaker	Title	Room / Capacity		
14:00-14:30   Piero Baglioni   Nano-science and its contribution to the conservation of Cultural Heritage   Nano-Gels, emulsions and nanomaterials: theoretical aspects   Nano-Gels, emulsions and nanomaterials: theoretical audience, and will interest conservators and scientists.   Sloane Room   Nano-Section of College Break   Nano-Gels, emulsions and nanomaterials: theoretical aspects   Nano-Gels, emulsions and nanomaterials: theoretical audience, and will interest conservators and scientists.   Sloane Room   Nano-Gels, emulsions and nanomaterials for the conservation of College Break   Nano-Gels, emulsions and nanomaterials for the conservation of College Break   Nanon-Gels, emulsions and nanomaterials   Nanon-Gels	DAY 1: (Tue) 4 June 2019					
14:30-15:30 Piero Baglioni Cultural Heritage  14:30-15:30 Piero Baglioni Nano-Gels, emulsions and nanomaterials: theoretical aspects  15:30-15:50 Coffee Break  15:50-16:40 Gabriella di Carlo Innovative protective materials for the conservation of metal works of art  16:40-17:30 Antonio Mirabile The use of Nano-systems in the conservation of cellulose-based artworks. Case studies.  17:30-18:00 Discussion and Questions [an invited chair will field questions]  DAY 2: (Wed) 5 June 2019  Practical workshops on Nano-Materials  Piero, Baglioni, Gabriella di Carlo and Antonio Mirabile of the novel materials for cleaning, consolidating and protecting works of art: a practical introduction and demonstration on the use, reuse, recycling and handling of the novel materials.  Coffee break somewhere in the middle of this session.  12:30-14:00 Lunch  14:00-17:30 Gabriella di Carlo and Antonio Mirabile or expendable case studies on organic materials such as Antonio Mirabile paper, leather, wood  Application of innovative protective materials from nontoxic solvents for the conservation of copper and silver alloys.  Coffee break somewhere in the middle of the conservation of copper and silver alloys.	•
